PROFILE

Data & analytics professional with cross-functional leadership experience turning complex quantitative models into executive decision-making tools. Track record of designing data-driven strategies that deliver measurable business impact, from supply-chain governance to dynamic pricing and customer offer optimization. I am naturally versatile and adapt to any industry and data type. Eager to bring structured problem-solving and analytical rigor to an Associate Consultant role. Available for a full-time position.

EDUCATION

B.S. Degree in Data Science and Mathematics <i>Tecnológico de Monterrey (ITESM), Mexico</i>	<i>Aug 2022 – Jun 2026</i>
International Program in Business Models & AI <i>CBS International Business School, Germany</i>	<i>Sept 2025 – Feb 2026</i>

PROFESSIONAL EXPERIENCE

McCormick & Company (Flavor Solutions) — Data Intern <i>Project "Commercial Execution" — Commercial-CPFR (Collaborative Planning, Forecasting & Replenishment)</i> - Designed and implemented, end-to-end, a single source of truth in Power BI adopted by Senior Leadership, enabling weekly strategic decisions, operational-compliance tracking, and proactive supply-chain risk mitigation. - Partnered directly with the Managing Director of Flavor Solutions in weekly working sessions, translating business priorities into an executive governance tool used in leadership committee meetings. - Led requirements-gathering and cross-functional alignment across 4 business areas (Commercial, Supply Chain, Customer Service, Planning), standardizing decision rules into a formal Decision Playbook. - Built a star-schema data model in Power BI/Power Query integrating SAP, demand planning (IBP), and logistics data, and developed advanced DAX logic for live demand sensing and Plan Adherence tracking — giving leadership real-time forecast visibility. - Implemented an exception-management framework (Watch-outs, Pareto analysis, Reason Codes) that flagged transportation, quality, and supply risks before shipment, enabling preventive action.	<i>Jun – Aug 2026</i>
---	-----------------------

CO-CURRICULAR EXPERIENCE

Vertiche — Training Partner <i>Client Project: Petty-Cash Reimbursement Automation (AI Process Redesign)</i> - Designed the data architecture and AI strategy to digitize a retail chain's petty-cash reimbursement process, scoping a real client pain point into an actionable technical solution. - Automated CFDI (tax-receipt) validation and expense categorization using OCR/NLP, cutting manual rework and shortening validation turnaround across stores, analysts, and senior management.	<i>Mar – Jun 2026</i>
CBS Business School — Academic Consulting Project <i>Dynamic Pricing Strategy for Perishable Goods</i> - Designed a Python-based dynamic pricing model — grounded in shelf-life and demand-elasticity research across European retail markets — to reduce near-expiry food waste. - Built a real-time pricing engine in Python plus a relational SQL data model for inventory, historical pricing, and category-level business rules. - Delivered a 60% reduction in food waste and 20%+ margin recovery vs. static discounting, validating the model's business case.	<i>Sept 2025 – Jan 2026</i>
QLIK — Training Partner <i>Client Project: Banking Offer Optimization</i> - Analyzed 50,000+ records across an 8-database ecosystem (new/existing customers, branches, error logs) using SQL to identify the drivers of offer acceptance. - Designed an executive Qlik Sense dashboard segmenting KPIs by customer type, tier, and product, equipping leadership to make faster, data-backed marketing decisions.	<i>Oct – Dec 2024</i>

SKILLS & ADDITIONAL

Core Skills: Data Analysis & Visualization | Structured Problem-Solving | AI-Driven Optimization | Applied Mathematics | Technical Communication | ML Model Design | Executive BI Governance

Tools: Python, Power BI/DAX, Excel, Git (Advanced) | SQL, Tableau, R, Google Cloud (Intermediate)

Languages: Spanish (Native) | English (Advanced) C1 - TOEFL iBT 105 | German (Intermediate, B1)
