

OMAR RODRIGUEZ MONTIEL

DATA SCIENTIST AND MATHEMATICIAN ENGINEER

Mexico City, MEX | +52 55 2533 1648 | omarrodmon10@gmail.com | www.linkedin.com/in/omarrodmon

PROFESSIONAL PROFILE

Data Science and Mathematics Engineer with international experience in Germany, where I developed and implemented AI, data analytics, and business projects. I also have experience in optimization and machine learning projects with real-world impact for companies like Qlik and Vertiche.

I am naturally versatile and adapt to any industry and data type. My approach combines technology and social sciences to find patterns, make data-driven decisions, and solve real business problems related to processes, products, or services. Available for a full-time position.

CO-CURRICULAR EXPERIENCE

Vertiche | Training Partner | March 2026 - Present

Petty Cash Optimization Project - Process Automation with AI

- Design the data architecture and AI strategy to digitize the petty cash reimbursement process for a chain of stores: from the automatic validation of CFDI invoices (RFC, tax ID, SAT validity) to the classification of expenses by category using OCR/NLP. This will optimize manual corrections and reduce validation times between stores, analysts, and senior management.

CBS Business School | School project | September 2025 - January 2026

- Designed an AI-powered dynamic pricing system using Python to optimize the sale of products nearing their expiration date. This involved conducting European market research and integrating business logic.
- Developed a mathematical model for real-time price adjustment based on shelf life and demand elasticity. I also created a relational data model in SQL (Entity-Relationship) for managing inventory, historical prices, and business rules by category.
- Achieved a model that reduced food waste by 60% and recovered margins by over 20% compared to static discounts.

QLIK | Training Partner | October - December 2024

Bank Offer Optimization Project

- Analyzed datasets of over 50,000 records, integrating and processing an ecosystem of eight relational databases (new and existing customers, branches, and error catalogs) to identify offer acceptance patterns.
- Designed an executive dashboard in Qlik Sense with KPIs and visualizations segmented by customer type (Credit vs. Deposits), segment (Mass, Advance, Premier), and product type, facilitating strategic marketing decision-making.

EDUCATION

B.S. Degree in Data Science and Mathematics

August 2022 – June 2026

Tecnológico de Monterrey, Mexico

International Program of Business Models & AI

September 2025 – February 2026

CBS International Business School, Germany

SKILLS

Data Analysis and Visualization | Deep Analytical Thinking | AI Optimization | Applied Mathematics | Technical Communication | ML Model Design

PROGRAMS

- | | | |
|----------------------|--------------------------|-------------------------------|
| • Python (Advanced) | • Excel (Advanced) | • Git (Advanced) |
| • SQL (Intermediate) | • Tableau (Intermediate) | • Google Cloud (Intermediate) |
| • R (Intermediate) | • Power BI (Basic) | |

LANGUAGES

- Spanish: Native
- English: Advanced C1 (TOEFL IBT: 105)
- German: Intermediate (B1)
